High-Level Process

This guide will outline the utilization of the steps to create, populate, validate and upload a tuition adjustment EIB in Workday for mass data entry. The benefits department will provide the tuition adjustment information for each pay group, along with student/staff member(s) affected by the given transaction deadline. The payroll team will upload the **Enterprise Interface Builder (EIB)** into Workday; uploading the input to the employees' pay result.

Tuition Adjustments are provided via **Service Now tickets** from Heather Heisel.

Creating the Tuition Adjustment EIB

Benefits will create a ticket via Service Now and assign directly to the Payroll Department by the transaction deadline.

1. Upon receipt from Benefits, the Service Now ticket will be assigned to the appropriate Payroll Specialist for upload into Workday.
2. In the top left corner of the ticket, you will find the attached **Enterprise Interface Builder (EIB),** once opened, Select **Enable Editing** and **Enable Content.**
3. The EIB will be saved in the following location under the file name:
    a. CY2025 > Monthly > 08.29.25 > EIB
    b. Tuition Adjustments MO 9.30.25
    c. Remember, to save an XML file for the data to populate accurately.
4. Once the EIB has been with the corresponding pay period, it will be uploaded into Workday.

Loading the Tuition Adjustment EIB

Validating and uploading the EIB is the most critical part of the process. It's highly recommended to first validate the EIB in a testing environment to identify and correct and errors before uploading it to production.

1. Launching the Integration: From the **Related Actions** menu, select **Integration** > **Launch/ Schedule**

a. 
b. 
2. Upload the file: On the launch screen, select the **Integration Attachment** field
   a. Choose **Create** > **Create Integration Attachment**

   b.

3. **Validate the EIB:** Before you click **OK** to launch the integration, check the box for **Validate File Only.** This will run the EIB through Workday's validation process without loading the data.

   a.
   b. This is also good practice to check the box for **Add Errors to Attachment**
4. **Monitoring the Validation Process:** Click OK to launch the validation process
   a. A background process will start. You can monitor its progress by searching for the **View Background Process** task.
   b. Refresh the page until the status changes from "Processing" to Completed" or "Completed with Errors."
5. **Review the Validation Results:**
   a. If the status is "Completed" your file has been validated. You can now proceed to the final upload steps
   b. If the status is "Completed with Errors", you will need to correct those errors
      i. Click on the background process and scroll down to the **Execution Summary.**

Execution Summary 1 item

Background Process	DateTime	Total Records	Total Records Processed	Total Failed Records	Percent Complete	Execution Summary
	09/04/2025 11:15:07.997 AM	5	5	0	100	SUCCESS (Validation Only Mode): All records l

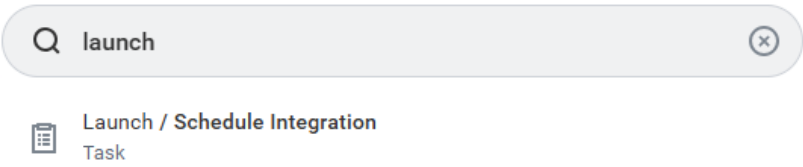
ii.

c. Look for an attachment with the name “Failure Report” or “Error Details” You can open this attachment to view a detailed summary of the errors.

d. Correct the errors on your original EIB template and repeat the validation process until the file status is “completed”

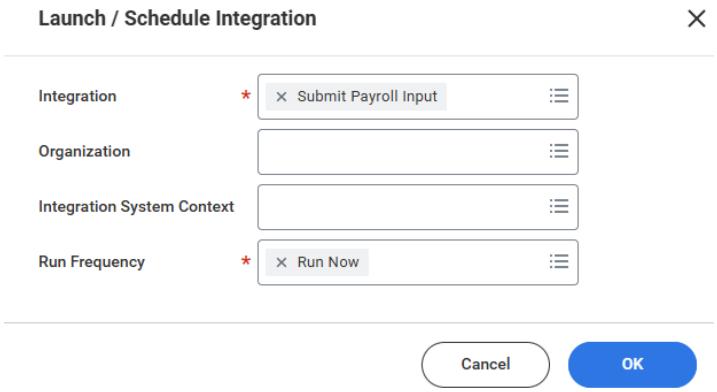
6. **Launching the EIB:**

a. From the **Related Actions** menu on the Home page, select **Integration > Launch/Schedule**



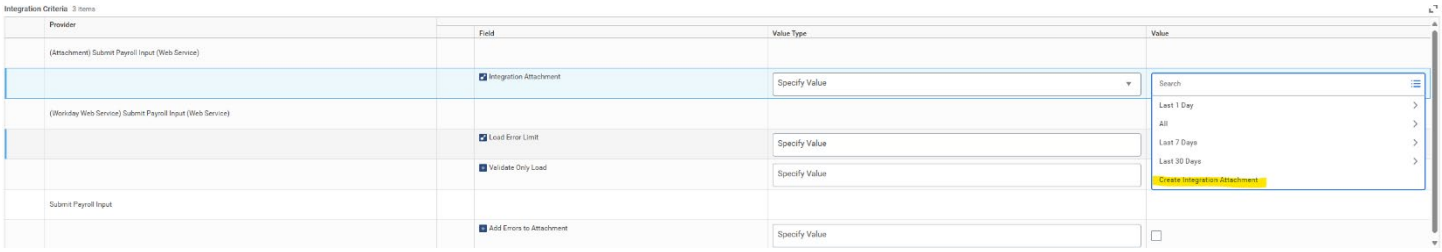
b.

c. On the Launch Integration screen, you will see a field for **Integration Attachment**



d.

e. Click the **Create** button next to this field and select **Create Integration Attachment.**

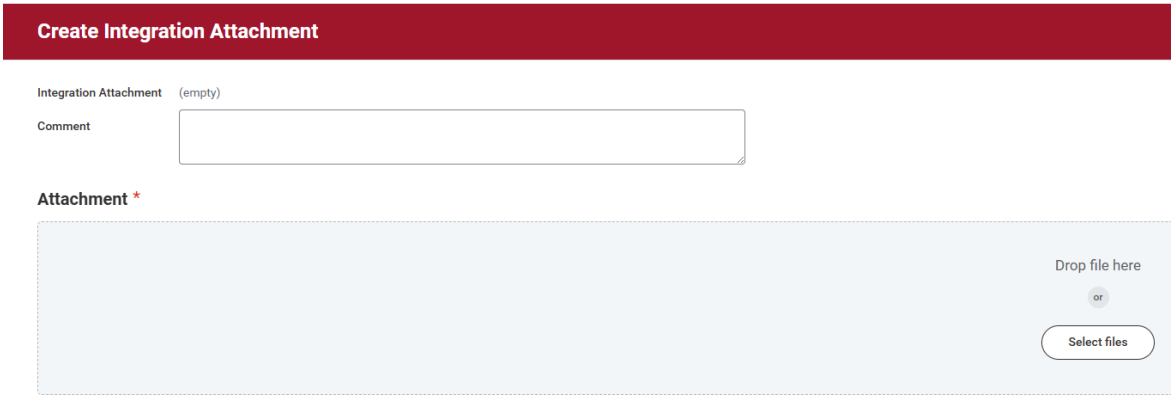


f.

g. A new window will appear, select the **Attach** button.

h. Browse your folder and select your final, validated EIB Spreadsheet.

i. Select **OK** to attach the file, wait for the file name to load in the Integration



Attachment field.

7. **Configure the Launch Options:** This is a pivotal rule of the EIB process. Since the EIB has already been validated, you are now ready to perform the final data load.
   a. **Leave "Validate File Only" unchecked:** This is the difference between a validation run and an actual load. Unchecking this box tells Workday to process the data and update the system.
   b.
   c. **Add any Requirements:** Depending on the EIB, there may be additional parameters that need to be set on the launch screen. Example, there may be a "Cut Off" date or a Business Process.
      i. **Due to this EIB being a "Submit Payroll Input" there are no additional parameters that will need to be corrected.**
8. **Launch the EIB and Monitor the Process:** Click **OK** to launch the integration
   a. Workday will begin a background process to load the data. You will then be redirected to the **"View Background Process"** page.
   b. On this page, click the **refresh** button periodically to check the status. This status will change from "Processing" to either "Completed" or Completed with Errors"
9. **Verify the Results:**
   a. **If the status is "completed":** This means that the EIB has successfully processed all the data
   b. Next, click on the process and review the **Execution Summary** to confirm that "All records Loaded Successfully"

Execution Summary 1 item

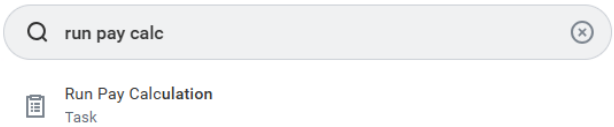
Background Process	DateTime	Total Records	Total Records Processed	Total Failed Records	Percent Complete
	09/04/2025 11:08:17.137 AM	5	5	0	100

i.

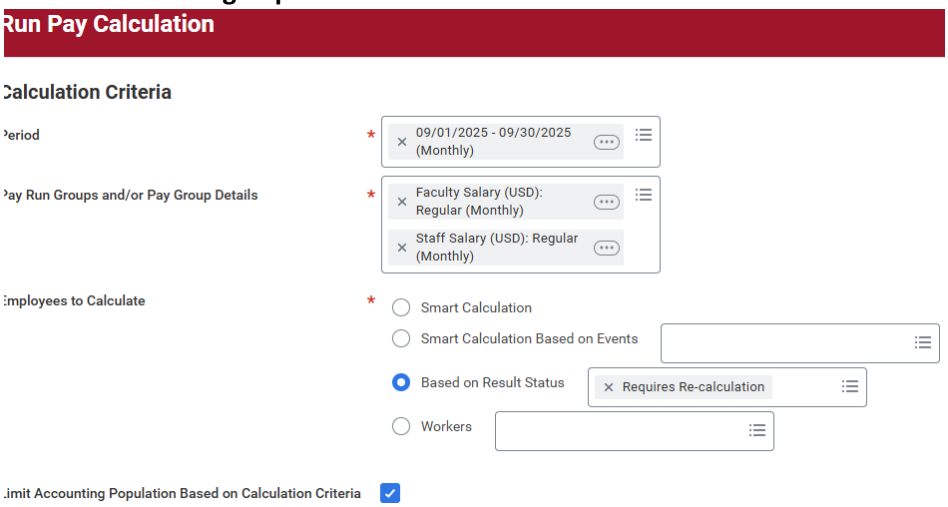
c.
d. Perform a post-upload verification by navigating to a few of the records to verify the data has been uploaded correctly.
e. **If the status is "Completed with Errors":** This indicates that some records failed to load
f. Click on the process and scroll down to the **Execution Summary.**
g. Look for an attachment with the name "Failure Report" or "Error Details". This report will provide specific details of why the records failed
h. Correct the errors in your original EIB spreadsheet and repeat the launch process, though, only with the records that failed. It is not necessary to re-load the entire file.

Confirming the EIB Load

1. Search Run Pay Calculation in Workday

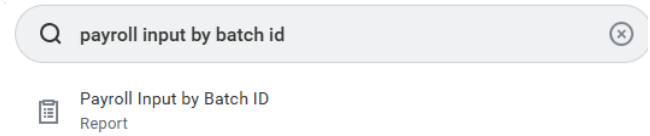


a.
2. Select the corresponding pay group and period for which the EIB was loaded.
3. Under Employees to Calculate select Based **on Result Status** > **Requires Recalculation**, **Pending Completion of Retro**, and **Waiting to pick up Retro Difference**.
4. Select the **Limit Accounting Population Based on Calculation Criteria** checkbox.

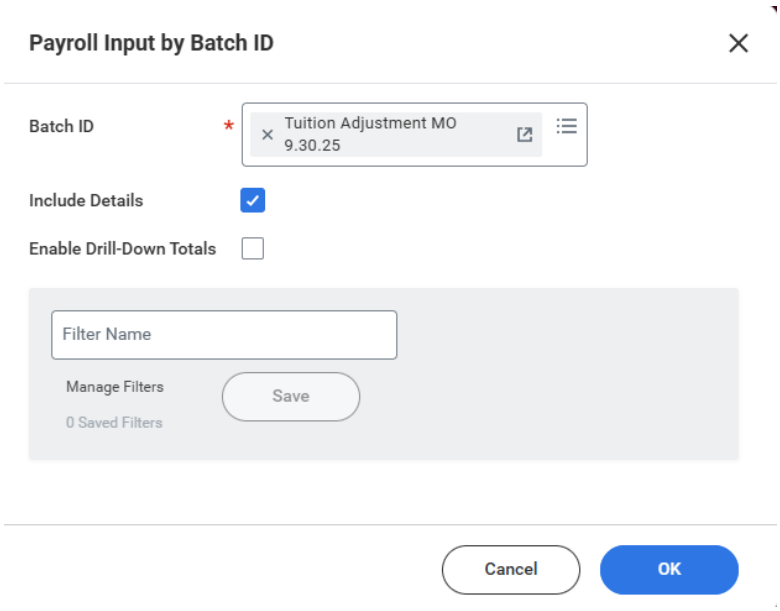


a.
5. Click **OK**.
6. Click **Refresh** periodically until the recalc is completed.
7. Next, to review your Batch ID, you can run a report specified for the unique identifier to ensure all inputs are accurate before payroll calculations run. This report is **"Payroll Input By Batch ID"**

a.



b.



c. Click **OK >** once the report loads. Export to Excel.

Input 5 items

Payroll Input	Worker	Batch ID	Start Date	End Date	Pay Component	Ongoing vs. One-time	Adjustment vs. Override	Run Category Type	Input Details				
									Type	Value	Used in On-Cycle	Used in Off-Cycle	Used in Retro
	Ambrass, Charlotte (ambrass)	Tuition Adjustment MO 9.30.25	09/01/2025	09/30/2025	Undergrad Tuition Reimb Elsewhere - Dependent	One-time	Adjustment	Regular	Amount	(5,115.00)	1	0	0
	Chapman, Gretchen (gchapman)	Tuition Adjustment MO 9.30.25	09/01/2025	09/30/2025	Undergrad Tuition Reimb Elsewhere - Dependent	One-time	Adjustment	Regular	Amount	(19,378.80)	1	0	0
	Forman, Lindsay (lforman)	Tuition Adjustment MO 9.30.25	09/01/2025	10/31/2025	Undergrad Tuition Reimb at CMU - Employee	Ongoing	Adjustment	All Run Categories	Amount	(1,755.00)	1	0	0
	Khaky, Youssef (ykhaky)	Tuition Adjustment MO 9.30.25	09/01/2025	09/30/2025	Undergrad Tuition Reimb at CMU - Employee	One-time	Adjustment	Regular	Amount	763.00	1	0	0
	Kinnamon, Katie (kkinnamo)	Tuition Adjustment MO 9.30.25	09/01/2025	10/31/2025	Undergrad Tuition Reimb at CMU - Employee	Ongoing	Adjustment	All Run Categories	Amount	(1,755.00)	1	0	0

i. When the report loads, we will filter to make sure all the “On Cycle” column is all “1”. If there are any “0”, we will need to investigate as to why the input did not pull through.

ii. This report easily identifies and audits a specified group of inputs. It’s purpose is for troubleshooting or managing data from third-party systems.

iii. If there’s an error in the loaded data, you can use the **“Delete Payroll by Batch ID”** task to remove the entire batch at once. This is more efficient than deleting individual entries.

Checking the EIB

1. A member of the payroll team will conduct a second check of the EIB. This includes a variance check from the Raw Data to the Payroll Input by Batch ID.
2.
